Operating Table Accessories

Looking after you and your patients
Anetic Aid is a UK-based manufacturer which has been designing, supplying and supporting equipment across the country and internationally, since 1977. Renowned for innovation and high quality, we listen to customers and work closely with them to develop state-of-the-art products for a variety of clinical environments.

This brochure shows our wide range of Operating Table Accessories where we focus on providing patient comfort and safety combined with the practical requirements of diverse surgical procedures.

Patient positioning, frequently combined with sophisticated pressure care technology, is a key feature of these products, and we also focus on ergonomics, looking at the needs and welfare of the practitioner in using and storing them.

All of our products are manufactured to a documented in-house quality control procedure, individually inspected and guaranteed against any defects in materials or workmanship.

Customer Service
Members of our qualified sales team are available for consultations and can often provide sample products for on-site trials. We also offer demonstrations and training to ensure users fully understand the features of each item.

Innovative technology – practically applied

Recent evidence suggests that any patient undergoing surgery for more than three hours faces a risk of developing pressure sores. This is caused by the patient’s immobility during the operation and the use of anaesthesia.

Anetic Aid’s K8 technology mattresses can be found in over 90% of NHS hospitals in the UK.

Pressure care and infection control are top priorities in a patient mattress – and Anetic Aid’s independently tested K8 pressure care mattress addresses both of these vital factors. At its core is high density foam, uniquely specified by Anetic Aid. This means that the mattress can be thinner, while still offering the same, if not better, pressure distribution than a thicker, less sophisticated foam. This is particularly important with tables and trolleys, as it means the overall height can be kept as low as possible for easy access by frail or elderly patients.

We then add a layer of thermally responsive gel-feel memory foam, which helps to relieve pressure by distributing the patient’s weight as evenly as possible across the surface area – whatever their position. Both of these foam elements have antibacterial and microbial fungicidal properties – but we go further. We add a latex-free, 4-way stretch polyurethane (PU) outer cover to each mattress (most materials being 2-way stretch), which is made of an anti-microbial, water resistant, vapour permeable material. This means it is not only contamination-resistant, but it also allows the skin to breathe – for greater patient comfort.

Finally, our unique ultrasonic sealing system effectively welds the seams of the outer cover material together to give an almost unbreakable seal, making the K8 a class leader in infection control.

In the science of Kinetics, there are eight points of contact the human body makes when lying on a hard surface – hence K8.

Measuring Service
Mattresses can be supplied to your own dimensions – and we offer an on-site measuring service. Please ask to see a member of our qualified sales team for a consultation to discuss your specific requirements.

Call us on: 01943 878647

Operating Table Pressure Care and Protection

Pressure Relieving Gel Sections
In addition to the K8 Pressure Care Mattress range, Anetic Aid also offers Trulife pressure relieving gel pads for operating tables.
With Oasis, there are a variety of shapes and sizes and some have a series of 30mm raised profiles which increase the overall surface area of the pad by 33%.
This unique design allows for greater weight distribution and is particularly effective during extended procedures.

Oasis Elite Pads can be used to protect the body in all surgical positions. The ultra light weight pad consists of a foam base and a gel top, allowing for easy carrying and manipulation by operating theatre staff.
• More than 50% lighter than comparable gel-only products

Description  Code
Operating Table Pad 520 x 520 x 30mm (Elite) 10865
3/4 Table Pad 1150 x 520 x 20mm (Elite) 10866

Azure Table Pads combine an ultra-soft and light weight silicone material on the base and a cured silicone gel on top, with a unique squared profile that cushions the body during surgery.
They can be used to protect the body in all surgical positions and are up to 20% lighter than comparable gel pads.

Description  Code
Profile Pad 520 x 520 x 10mm (Azure) 10886
Profile Pad 1150 x 520 x 10mm (Azure) 10887
Operating Table Pad 520 x 520 x 10mm (Azure) 10895

Tritón Disposable Absorbent Sheets

Absorption up to 3.5 litres of liquid per metre²
 keeps the operating table clean

Description  Code
Triton Impermeable and Absorbent Full Table/Trolley Sheet 1400 x 2000mm, Disposable (box of 60) 55812
Triton Impermeable and Absorbent Half Table Sheet 1400 x 1000mm, Disposable (box of 60) 55814
Triton Impermeable and Absorbent Small Sheet 500 x 450mm, Disposable (box of 180) 55815

Protecting patients’ skin – keeping theatres safe and dry

• The full size table/trolley sheet can also double as a transfer sheet (max patient weight 150kg).

Absorbent Table Sheets

Single product to cover the operating table

Tritón is an absorbent, impermeable, and disposable sheet developed specifically for use in theatre. It prevents the operating table from becoming soiled or wet, while keeping the patient’s skin completely dry.

No need for multiple layers of green sheets, underpads and plastic, Tritón absorbs and retains fluids, even when pressure is applied. This is because its absorbent layers turn into hydrogel – a metre² sheet can draw in over three litres of fluid.

Tritón is particularly useful for operating tables and delivery beds: by preventing contamination, it reduces the need to use strong disinfectants which can damage mats and table parts.

It is also ideal for use in treatment or plaster rooms, and for tables used for gynaecological examinations, urology procedures and biopsies.

Available in three convenient sizes, Tritón helps protect the patient’s skin from sores as it dries completely, barely a minute after getting wet.

• Keeps patients’ skin dry
• Protects the operating table
• Doubles as a transfer sheet up to 150kg

Pressure Care Head Supports for all Surgical Positions

Pressure care for the head is as important as any other part of the body during surgery. As well as foam 'doughnut' head rings made from the same material as our K8 Pressure Care Mattress, we have beanbags for positioning and a range of gel supports.

In the Oasis Elite range, we offer anatomically designed prone head rests which allow the patient to be positioned comfortably face down, with respiratory tubes in place. Meanwhile, there are several options for supine and lateral positioning from the Oasis and Azure ranges, including a special Oasis+ supine head and neck support. With an anti-slip base and top, it offers air ventilation and raised sides to provide more defined support.

**Supports, Retainers and Arm Tables**

Anetic Aid offers a wide selection of arm supports including arm tables for positioning and protecting patients in prone, supine or lateral positions.

Additional or replacement pads can all be purchased separately.

---

Secure positioning for procedures from carpal tunnel release to fracture repair
Arm and Hand Supports, Retainers and Hand Tables

Anetic Aid offers a wide selection of arm supports including hand tables, for positioning and protecting patients in prone, supine or lateral positions.

Additional or replacement pads can all be purchased separately.

- Flat armboard pads have a slight indentation to cradle the arm and provide effective pressure relief during various surgical procedures.
- The Azure Arm Protector assumes the shape of the individual patient’s arm, acting as a second layer of tissue and offering excellent protection against nerve damage.

### Elbow Protector

This wipe-clean elbow protector offers a high level of padding to protect soft tissue and the ulna nerve. It can also be used as an effective ankle protector.
Shoulder, Spine and Torso

Ease of Positioning for a variety of Shoulder Procedures

The Beach Chair is ideal for positioning during shoulder procedures as it offers unobstructed posterior access and its special Lift-Assist™ mechanism makes re-positioning quick and easy as the pistons support most of the patient's weight. The chair lies flat for clear anaesthetic access and the Lateral Slide feature enables the surgeon to move the patient closer to the edge of the operating table for increased surgical site access.

The Beach Chair is suitable for procedures including:
- Rotator cuff repair
- Clavicle repair
- Bankart repair
- SLAP lesion repair
- Total shoulder replacement
- Subacromial decompression

The Lift-Assist™ Beach Chair weighs under 14kg without the back support panels installed.

- Clavicle repair
- Reverse total shoulder replacement
- Subacromial decompression

Make positioning easy with one-handed Lift-Assist™ mechanism
Shoulder, Spine and Torso

Weightless Shoulder Traction System

The Weightless Shoulder Traction System allows for approximate traction settings up to 18.2kg with a simple turn of the tension adjustment knob.

The boom arm adjusts from 0° to 90° and the boom head swivels so that its pulley always aligns properly with the cord. The system folds down for easy storage.

The system is designed to be used with single-use, disposable arm traps which are supplied in packs of six.

Radiolucent Spine Surgery Frame

The Radiolucent Spine Surgery Frame is a lightweight, radiolucent platform used to perform less complex spine surgeries. It is more versatile than the Wilson™ Frame, as the single device attaches to standard operating tables. Its shape creates the desired reverse lordosis needed to open the intervertebral spaces. The Frame enables the patient’s abdomen to hang free during procedures. It is radiolucent and allows for unrestricted C-arm access.

The removable crank is used to adjust the amount of flex and tension in the patient supports and every Frame comes with a storage cart. The Frame has a patient weight limit of 227kg.

It is used in disc, microdisc and fusion procedures as well as laminectomies and decompressions.

- For positional stability during spinal surgery

Table Width Extenders

Table Width Extenders increase the support surface for larger patients.

Their integral locking mechanism clips easily to the rail and they can be used individually or in multiples to create a custom platform.

Lateral and Pelvic Supports

All of our extensive range of braces and supports have been designed with a combined emphasis on patient safety and surgical access.

As well as being appropriate for most makes of operating table, these accessories can be used with Anetic Aid’s QA4 Day Surgery System – a complete mobile operating system.

The braces and supports are supplied with pads, and additional or replacement pads can also be purchased separately.
Montreal Laminectomy Support

The Montreal Laminectomy Support is a prone positioning device used in spinal surgery. The central hollow relieves pressure on the diaphragm ensuring that the patient can breathe easily.

There are two options in the Anetic Aid range: the first is manufactured to K8 pressure care specification and ergonomically designed to ensure maximum patient comfort. All edges are sealed for easy cleaning.

The second is a silicone gel and light weight foam combination from the Oasis Elite range which has a precontoured surface to provide superior pressure relief and patient protection.

Pressure Relieving Gel Sections

Surgical procedures involving the spine, the shoulder and the main torso are often those of longer duration.

And it follows, that the longer the surgical procedure, the more important pressure care becomes.

Our Oasis and Oasis Elite ranges offer both patient protection and patient stability for these complex surgical specialisms.

Vacuum Beanbags

Vacuum filled beanbags are regularly used to stabilise a patient’s position on the operating table.

Anetic Aid offers a range of shapes and sizes from full body to head stabilisers.

Protecting Patients with Lift-Assist™ Lithotomy Stirrups

References to the lithotomy position have been found in some of the oldest known medical documents.

Lithotomy comes from the Greek words for stone ‘lithos’ and cut ‘tomos’, and it was named after the ancient surgical procedure for removing kidney stones, gall stones and bladder stones via the perineum.

Today, the position is widely used for procedures ranging from simple pelvic examinations to surgeries in gynaecology, urology, and other gastrointestinal specialisms.

The advantages for the medical practitioner are obvious in terms of visibility and access, but care has to be taken to protect the patient from potential nerve damage caused by pressure, and from over extension of abductor muscles.

Our boot type Lift-Assist™ Lithotomy Stirrups can significantly help to reduce risks in both of these areas: sold in pairs, all of our stirrups have self adjusting boots designed to cover and protect the head of the fibula and hence, the peroneal nerve.

They minimise pressure on the calf when moving the stirrup and the hydraulic mechanism allows easy movement of the leg when placing it in the desired position without compromising the sterile field. Simply releasing the twist grip handle secures the leg holder in all directions.

### Lift-Assist™ Lithotomy Stirrups

**Description**
- Self adjusting boots
- Hydraulic mechanism for power assisted movement

**Mobile Storage Cart**

This is the perfect way to store and protect your investment: a strong and light weight cart which holds and transports stirrups or legholders.

Compact and state-of-the-art, it can take stirrups from any manufacturer as it has two different size hooks (up to a 19mm rod on the smaller hook and up to a 25mm rod on the larger one).

The sturdy, moulded, four-castor polymer base is dent-resistant and the deep storage bin is a great place to store clamps and pads securely.

Surgical access – patient stability

Providing the best possible surgical access while maintaining patient stability are particularly important in procedures involving the foot and leg.

All of our products have been designed to accommodate these aspects together with the need for pressure care.

Arthroscopic Legholder

The Arthroscopic Legholder immobolises the thigh and allows for lower leg manipulation during knee arthroscopy.

A removable slotted post facilitates the placement of the patient’s leg into the holder while the stabilising bar restricts upper leg movement during knee manipulation.

Knee Stabiliser

A convenient, stable device to support the flexed leg during total knee procedures, the Knee Stabiliser eliminates awkward sandbags and simply mounts to the table rail.

The 300mm long by 100mm diameter foot support is covered with a fabricated, replaceable closed-cell foam pad. The 360mm long mounting bar permits vertical height adjustment whilst the flat 6mm x 30mm cross section prevents unwanted rotation.

The device has a patient weight capacity of 227kg and comes with three disposable pads and with additional packs of 12 available to purchase separately.

Prepper

This padded cradle comfortably supports a patient’s leg during prep procedure.

The shaft can be rotated to move offset in various positions for convenient access to the leg.

Abduction Board

The Anetic Aid Abduction Board fits under the mattress of the operating table or trolley providing K8 Pressure Care extension pads for the patient's heels after their legs have been abducted for procedures such as Varicose Vein removal.

Well-leg Holder

Our Well-leg Holder is the perfect solution when a patient’s non-operative leg needs to be secured in position so as not to impede surgical access to the operative limb.

The equipment comprises a steel rod and a padded boot secured with hook and loop fastening.

Investigative surgery, total knee and ankle replacement procedures

### Specialist Protection for Heels

The anatomy of the heel – its combination of nerves and lack of soft tissue over the bone – make it one of the most vulnerable parts of the body during surgery, particularly when the patient is in a prone position.

We offer a wide range of protective pressure care.

<table>
<thead>

</table>

*Oasis+ heel supports are made from a medical grade siloxane elastomer, one of the most durable materials on the market today.*

The design allows the full foot to be in a resting position while also relieving all pressure from the calcaneal aspect of the heel.

- Over 30% lighter than similar products on the market
- Comfort and support for the patient
- Hypoallergenic and anti-slip
- Autoclavable

**General Accessories**

**Wide Portfolio of Items**
Specialisms aside, there are a huge number of general operating table accessories to be found in Anetic Aid’s portfolio – from tube holders and screens to clamps, bean bags and stool cushions.

Many of them are designed and produced at our manufacturing base in Portsmouth, where members of our engineering and production team ensure that they use all means with the same attention to detail and rigorous quality procedures as our sophisticated trolley and tourniquet systems.

We also seek out state-of-the-art accessories from other specialists in the field who have the same ethos and philosophy as Anetic Aid – innovative technology, practically applied.

Please ask to see a member of our qualified sales team for a consultation to discuss your specific requirements.

Call us on: 01943 878647

**Miscellaneous**

Our rubber ferrules are anti-slip and easy to clean.

We offer two sizes, both sold in packs of five.

**Comfort Mat**

We have a special comfort mat for surgeons, nurses and medical technicians working in theatre.

It is an ergonomic solution designed to combat fatigue and discomfort by providing a softer and more supportive surface to stand on.

**Description**

- Rubber Ferrules, 19mm (pack of 5) 10270
- Rubber Ferrules, 25mm (pack of 5) 10271
- Security Strap, Medium c/w Padded Centre Section NO HOOKS 10792
- Security Strap, Large c/w Padded Centre Section NO HOOKS 10793
- Security Strap Hooks (single unit) 10794
- Table Width Extender 100 x 510mm for UK Side Bar c/w 75mm Pad 10788
- Table Width Extender 100 x 510mm for EU Side Bar c/w 75mm Pad 10788-EU
- Comfort Mat 510 x 480mm 10797

**Suture Snooper**

It doesn’t happen often, but if a suture needle drops onto the floor during a procedure, it’s obviously essential to find it – and find it quickly.

Our magnetic ‘Suture Snooper’ is the perfect solution, reaching into awkward corners or under equipment – especially the operating table – easily and effectively.

**Description**

- Anaesthetic Tube Holder, Flat 10120
- Anaesthetic Tube Holder, Angled 10122
- Anaesthetic Screen c/w Pad 10190
- Anaesthetic Screen ONLY 10191
- Anaesthetic Screen Sleeve 10192
- Omni Directional Tube Holder / Anaesthetic Screen 10125

**Pressure Care Pads**

Pressure Care Pads are fitted as standard with spares available for both cushions and backrests.

**Description**

- Surgeon’s Cushion 330mm diameter 10130
- Surgeon’s Cushion 380mm diameter 10138
- Surgeon’s Backrest 250 x 150mm 10139
- Surgeon’s Backrest 200 x 200mm 10132

- Rotary Clamp, Clip-on™ Socket – EU Side Bar 10246
- Rotary Clamp, Socket – Stainless Steel for UK and EU Side Bar 10248
- Universal Clamp, Socket and Rail for UK and EU Side Bar 10250
- Clamp, Basic Blade Handwheel for UK and EU Side Bar 10767
- Clamp, Clip-on™ Blade Handwheel for UK Side Bar 10768
- Clamp, Clip-on™ Blade Handwheel for EU Side Bar 10764

**Surgeon’s Seating**

Our gas-lift stools are made in a modular design which allows customers to choose the exact specifications to meet their needs.

• Foot-operated to allow adjustment without compromising the sterile field

**Tube and Screen Holders**

We have maintained a simple form by enclosing the mechanism inside a moulded cover and all metalwork is mirror polished with a specialist heavy duty Teflon® coated finish on the base.

• Dual purpose: functions as a flexible tube holder or the frame for an anaesthetic screen

**Description**

- Anaesthetic Side Holder, Flat 10170
- Anaesthetic Tube Holder, Angled 10172
- Anaesthetic Screen c/w Pad 10190
- Anaesthetic Screen ONLY 10191
- Anaesthetic Screen Sleeve 10192
- Omni Directional Tube Holder / Anaesthetic Screen 10125

**Suture Snooper**

It doesn’t happen often, but if a suture needle drops onto the floor during a procedure, it’s obviously essential to find it – and find it quickly.

Our magnetic ‘Suture Snooper’ is the perfect solution, reaching into awkward corners or under equipment – especially the operating table – easily and effectively.

**Description**

- Suture Snooper 10796

**General Positioners**

We have a special comfort mat for surgeons, nurses and medical technicians working in theatre.

It is an ergonomic solution designed to combat fatigue and discomfort by providing a softer and more supportive surface to stand on.

**Description**

Vacuum Beanbag Positioner, Full length 1650 x 720mm | 10279

Patient Positioning with Stable and Comfortable Vacuum Bean Bags

Another option for patient positioning is our range of Snow-Pac vacuum bean bags.

Available in a number of shapes and sizes, Snow-Pacs are soft pads filled with thousands of tiny plastic beads.

The patient is placed in position and the Snow-Pac moulded around them before a suction line is attached to it. As a vacuum is created inside the Snow-Pac, outside atmospheric pressure forces the beads together so they cannot move.

When the suction line is disconnected, the Snow-Pac retains its firm, moulded shape and holds the patient securely in position.

After the procedure, the valve on the Snow-Pac is opened and as the vacuum source is removed the beads together so they cannot move.

Sandbags

We have small, medium and large Sandbags in stock, and can also supply Sandbags to your own dimensions.

Call 01943 878647 for details.

Pre-operative Glove, Adhesive – Single-use (box of 500) | 11000

Minimising the risk of pressure sores and infection

In the UK, dealing with pressure sores accounts for about 4% of national healthcare expenditure and the risk of pressure sores during surgery is well documented.

Yet it is also widely recognised that in most cases, pressure ulcers are preventable – so having the appropriate equipment and techniques for dealing with surgical patients is a top priority. For over ten years, Anetic Aid has been the sole UK distributor for Trulife’s Oasis, Oasis Elite, Oasis+ and Azure ranges of high quality gel pads and positioning devices.

- X-ray translucent
- MRI compatible
- Medical grade silicone
- Reusable
- Different budget options
- Extensive range

Trulife has produced an educational DVD to help healthcare practitioners in selecting the most effective product along with demonstrating the best technique for protecting patients, whatever their positioning requirement for surgery.

Oasis: The Original Silicone Solution

Oasis is an extensive range of reusable 100% silicone gel pads. The silicone is softer than both skin and underlying tissue which means that pressure is relieved by the slight movement of the silicone gel and resulting dissipation of pressure force across the product.

- Silicone superior pressure relief
- Conforms to body shape
- Latex free and skin compatible
- Comprehensive range
- Can be heated or cooled

Oasis Elite

Oasis Elite range combines silicone gel and light weight foam with a pre-contoured surface to provide superior pressure relief and patient protection in theatre. Anatomical pre-contouring facilitates greater conformity between gel and body shape, weight is then redistributed over a larger area. Oasis Elite products are more than 50% lighter than comparable gel-only products.

- Foam and silicone gel combination
- Enhanced protection
- Light weight
- Highly durable
- Easy to clean and maintain

Oasis

Oasis products are made from a medical grade silicone elastomer. Additional durability is ensured because the products have no outer film, making this an entirely unique product range. The ergonomic design of the product promotes the ultimate in pressure relief. In addition, the material has anti-slip properties, helping to provide comfort and support to the patient.

- Medical grade silicone elastomer
- No outer film ensures exceptional durability
- Ergonomic design
- Easy to clean and fully autoclavable
- Anti-slip properties

Redefining pressure care

The Azure range is the most advanced and innovative available in theatre today, offering the best pressure redistribution. Each product consists of two independent protective silicone layers that work in combination, allowing the moulded products to effectively conform to the individual user’s shape in a more contoured and less structured manner, resulting in effective protection against nerve damage and skin breakdown.

- Revolutionary new gel combination
- Contoured protection
- Redefining pressure care
- Advanced surgical positioning and protection
- 12 month guarantee

See the film at: trulife.com/videos and select ‘Trulife Surgical from Trulife’ or ‘Vimeo’.
Oasis reusable silicone gel pads and positioners provide superior pressure relief to the patient during various surgical procedures. The gel evenly distributes body weight, essential for the relief of pressure during surgery. All Oasis products can be heated or cooled and have an X-ray attenuation of 89.7%. They have a 12 month guarantee against manufacturing defects.

**Pressure Relieving Gel Supports**

- **Operating Table Pads**
  - Description: Operating Table Pad 520 x 520 x 10mm (Oasis) 10807
  - Description: Operating Table Pad 1150 x 520 x 10mm (Oasis) 10808

  - Description: 3/4 Length Profile Pad 1145 x 520 x 12mm (Oasis) 10818

- **Perineal Pad**
  - Description: Perineal Table Pad 520 x 520 x 10mm (Oasis) 10816

**First Aid Kit**

The Oasis First Aid kit is a temporary solution for accidental splitting of Oasis/Azure products during surgery. Each kit contains five sheets of highly durable adhesive film which are easily applied to gel products. Instructions for use are included on the packaging.

**Silicone superior pressure relief**

- Conforms to body shape
- Latex free and skin compatible
- Comprehensive range
- Can be heated or cooled

**Excellent pressure relief at all risk levels – can be heated or cooled**
A pressure sore is an area of localised damage to the skin and underlying tissue caused by pressure, shear, friction or a combination of all three. Bony prominences are most susceptible to damage which means that the elbows and heels are particularly vulnerable – and the Oasis range offers a number of products specifically designed for these areas.

### Patient Positioners

The Oasis Ulnar/Brachial Nerve Protectors provide essential pressure care protection for the sensitive areas of the elbows and arms.

#### Armboard Pads and Retainer Covers

- Silicone superior pressure relief
- Conforms to body shape
- Latex free and skin compatible
- Comprehensive range
- Can be heated or cooled

#### Ulnar/Brachial Nerve Protectors

#### Arm without protective pad

- Average pressure 35.9 mmHg

#### Arm with protective pad

- Average pressure 23.1 mmHg

### Ankle and Heel Protectors

The anatomy of the heel – its combination of nerves and lack of soft tissue over the bone – make it one of the most vulnerable parts of the body during surgery, particularly when the patient is in a prone position.

The Oasis range offers specialist pressure care:

- Comfort and support for the patient
- Over 30% lighter than similar products on the market
- Hypoallergenic and anti-slip

Unique light weight foam and silicone Trugel™ for superior pressure relief

Stability and pressure care in the lateral position

Major procedures which require lateral positioning, such as nephrectomy and hip replacement, require total stability and pressure care.

The Oasis Elite Lateral Positioner enables a safe, quick and easy transition from supine to lateral positions; the patient’s lower shoulder fits into the integral channel to provide exceptional patient comfort and nerve protection, while the built-in headrest and auxiliary support assists in proper spinal alignment and surgical site access.

- Stability and pressure care combined
- Easy transition from supine to lateral
- Patient comfort and nerve protection

Oasis Elite products combine a unique light weight foam with silicone Trugel™ to provide superior pressure relief and enhanced patient protection in theatre. They are more than 50% lighter than comparable gel-only products and are easy to clean and maintain.

Oasis+ offers the ultimate in pressure relief and positioning: the products are fully autoclavable and reusable, as well as being ergonomically designed, with a special anti-slip base.

Developed following in-depth research, Oasis+ products are made from a medical grade siloxane elastomer. They have additional durability because they have no outer film, making this an entirely unique product range.

Pressure Relieving Gel Supports

Oasis+ Discs help to keep gel products in place and aid slip reduction. Available in a single size, they can be used with any Trulife product range.

Oasis+ Discs come in boxes of 10.

Heel Supports

As well as Heel Protectors, we now have new Heel Pads in the Oasis+ range, offering the ultimate in pressure relief.

The design allows the full foot to be in a resting position while also relieving all pressure from the calcaneal aspect of the heel.

The pad has hypoallergenic and anti-slip properties to provide comfort and support for the patient.

Pressure Relieving Gel Supports

Head and Neck Support

A new product has recently been added to this range – a single piece supine head and neck support.

Made from silicone rubber, one of the most durable materials on the market today, it is an excellent choice for surgical procedures such as middle ear and ophthalmics offering pressure care combined with support and superb stability.

Azure’s revolutionary gel combination works together to replicate and act as an additional layer of protective tissue and skin. It conforms to the individual user’s shape in a more contoured and less structured manner. This results in effective protection against nerve damage as well as pressure sore prevention. Azure products are redefining pressure care and are set to change the standards in theatre.

Pressure Relieving Gel Supports

**Head Protector**
The dual layer Azure Head Protector is innovatively designed to contour to the individual patient’s head, conforming comfortably while providing effective protection to the patient.

The patient is on their side, with their bottom leg flexed and their top leg straight. The bottom arm is supported on an arm board, and the top arm has special support.
Obstetrics Pads and Mattresses

Our K8 pressure care mattresses are ideal for Obstetrics. At their core is high density foam, uniquely specified by Anetic Aid. We then add a layer of thermally responsive gel-feel memory foam, which helps to relieve pressure by distributing the patient’s weight as evenly as possible across the surface area. Both of these foam elements have antibacterial and microbial fungistatic properties – but we go further. We add a latex-free, 4-way stretch Polyurethane (PU) outer cover to each mattress (most materials being 2-way stretch), which is made of an anti-microbial, water resistant, vapour permeable material. This means it is not only contamination-resistant, but it also allows the skin to breathe – for greater patient comfort.

Patient positioning which provides both comfort and security.
**K8 Patient Trolley Mattresses**

Pressure care and infection control are top priorities for patient mattresses – and Anetic Aid’s independently tested K8 pressure care mattress addresses both of these vital factors.

At its core is high density foam, uniquely specified by Anetic Aid. This means that the mattress can be thinner, while still offering the same, if not better, pressure distribution than a thicker, less sophisticated foam. This is particularly important with trolleys as it means the overall height can be kept as low as possible for easy access by frail or elderly patients.

We then add a layer of thermally responsive gel-feel memory foam, which helps to relieve pressure by distributing the patient’s weight as evenly as possible across the surface area – whatever their position.

Both of these foam elements have antibacterial and microbial fungistatic properties – but we go further. We add a latex-free, 4-way stretch Polyurethane (PU) outer cover to each mattress (most materials being 2-way stretch), which is made of an anti-microbial, water resistant, vapour permeable material. This means it is not only contamination-resistant, but it also allows the skin to breathe – for greater patient comfort.

Finally, our unique ultrasonic sealing system effectively welds the seams of the outer cover material together to give an almost unbreakable seal, making the K8 a class leader in infection control.

In the science of Kinetics, there are eight points of contact the human body makes when lying on a hard surface – hence K8.

**Padded Side Rail Covers**

Our durable, easy-to-clean Side Rail Covers are another reliable Anetic Aid product which can be used with our own trolley systems and on other models.

We offer a regular version and a padded version, the latter being packed with a soft protective foam. Rain colour or ‘Child Print’ pattern available.

As standard – all K8 Patient Trolley Mattresses are supplied as sealed units. Zipped mattress covers are available on request.

**QA3 Patient Trolley System**

A range of accessories has been specifically designed for Anetic Aid’s flagship product: the QA3 Patient Trolley System.

**K8 TECHNOLOGY**

- Anetic Aid’s K8 technology mattresses can be found in over 90% of NHS Hospitals in the UK.
A total solution for modern day treatment centres

The QA4 Surgery System is both a patient trolley and an operating table, with powered or manual versions to suit your needs.

Its hallmarks are superior surgical access and versatility: it comes with a choice of head and foot sections and can be used with most operating table accessories making it ideal for general surgery, urology and endoscopy. Anetic Aid also offers a number of other specialist accessories designed specifically for use with this sophisticated yet practical trolley which continues to be unrivalled in today's market.

Description Code
QA4 Day Surgery Trolley System, Powered Functions 21300
QA4 Day Surgery Trolley System, Manual Functions 21310

Headrests

Description Code
QA4 Day Surgery Trolley Ophthalmic Headrest 21320

The complete multi-purpose mobile operating system
Operating Table Accessories

Our comprehensive and competitively-priced range of Operating Table Accessories includes all kinds of positioning devices and operating table attachments.

Many of the items – Supports, Clamps etc – are designed and produced at our manufacturing base in Portsmouth, where members of our engineering and production team ensure that they are all made with the same attention to detail and rigorous quality procedures as the sophisticated trolley and tourniquet systems we are renowned for.

Please ask to see a member of our qualified sales team who will be pleased to discuss your specific requirements.

Guarantee

All of our products are manufactured to a documented in-house quality control procedure, individually inspected and guaranteed against any defects in materials or workmanship.
